                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Пþ
                                                                                                                                                                                                                                                                                                                                                         Patent No. 5876733
GENERAL INFORMATION:
      STREET: 2001 Jefferson Davis Hwy., 1.
STREET: Bldg. 1
CITY: Arlington
STATE: Virginia
COUNTRY: U.S.A.
ZIP: 22202-0286
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: LBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Vers
CURRENT APPLICATION DATA:
                                                                                                                                                                                                                     NUMBER OF SHOWLING.
COHRESPONDENCE ADDRESS:
ADDRESSEE: Sheemaker and Mattare, Ltd.
ADDRESSEE: Sheemaker and Mattare, 1203 Crystal Plaza
                                                                                                                                                                                                                                                                                                       APPLICANT: Barenkamp, Stephen J.
TITLE OF INVENTION: High Molecular Weight Surface Proteins
TITLE OF INVENTION: of No. 5876733-Typeable Haemophilus
                                                                                                                                                                                                                                                                                         NUMBER OF SEQUENCES:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           417

Patent No. 5876733
Patent No. 5876733
Patent No. 58767310N:
APPLICANT: Barenkamp, Stephen J.
TITLE OF INVENTION: High Molecular Weight Surface Proteins TITLE OF INVENTION: of No. 5876733-Typeable Haemophilus NUMBER OF SEQUENCES: 8
CORRESPONDENCE ADDRESS:
ADDRESSEE: Shoemaker and Mattare, Ltd.
STREET: 2001 Jefferson Davis Hwy., 1203 Crystal Plaza STREET: Bldg. 1
CTYY: Arlington
STATE: Virginia
COUNTRY: U.S.A.
ZIP: 22202-0286
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC Compatable
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION NUMBER: US/08/469,880
FILING DATE: 06-JUN-1995

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A_Geneseq_0401:*

                                                                                                                                                                                                                                                                                              y36754-y37949 are encoded by open reading frames (ORFs) of the genome Chlamydia trachomatis (see Z01425). The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequer can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma, paratrachoma, and inclusion conjunctivitis; genital diseases such as nongonococcal uretritis, epidymilis, cervicitis, salpingitis, perihepatitis, bartholinitis; pneumopathy in breast feeding infants; and venereal lymphogranulomatosis. The polypeptides of the invention may be of use in treating these diseases.

                                                                                                                                                                                                                                                                                                                                              This polypeptide comprises the novel 98.4 kDa surface exposed CC protein OmplO of the human respiratory pathogen Chlamydia C pneumoniae. Its amino acid sequence was deduced from DNA (see CC x06822) isolated from a C. pneumoniae expression library. The CC invention provides 12 novel surface exposed proteins, Omp4-Omp15 C (see W88417-28), and nucleic acid sequences encoding them (see CC x06816-27). A new species specific test is claimed that is used CC to identify mammals (including humans) infected with Chlamydia CC pneumoniae. The test comprises detecting antibodies specific for CC comp4-Omp15 or detecting nucleic acid fragments encoding these outer CC membrane proteins, especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The CC vaccines for effecting in vivo expression of antigens. The CC vaccines for effecting in vivo expression of antigens. The CC vaccines may also prevent atherosclerosis and bronchial asthma, CC which are possibly associated with C. pneumoniae.

                                                    protein Omp5 of the human respiratory pathogen Chlamydia
C pneumoniae. Its amino acid sequence was deduced from DNA (see
CC X06817) isolated from a C. pneumoniae expression library. The
CC X06817-20 isolated from a C. pneumoniae expression library. The
CC cinvention provides 12 novel surface exposed proteins, Omp4-Omp15
CC (see w88417-28), and nucleic acid sequences encoding them (see
CC X06816-27). A new species specific test is claimed that is used
CC to identify mammals (including humans) infected with Chlamydia
CC to identify mammals (including humans) infected with Chlamydia
CC comp4-Omp15 or detecting nucleic acid fragments encoding these outer
CC comp4-Omp15 or detecting nucleic acid fragments encoding these outer
CC comp4-Omp15 or detecting nucleic acid fragments encoding these outer
CC comp4-Omp15 or detecting nucleic acid fragments encoding these outer
CC comp4-Omp15 or detecting nucleic acid fragments are also used
CC nucleic acids and proteins can also be used in the immunization of
CC mammals, the nucleic acids being particularly useful as DNA
CC vaccines for effecting in vivo expression of antigens. The
CC vaccines may also prevent atherosclerosis and bronchial asthma,
CC which are possibly associated with C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WO9858953-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Chlamydia pneumoniae

```

protein Omp8 of the human respiratory pathogen Chlamydia pneumoniae. Its amino acid sequence was deduced from DNA (see x06820) isolated from a C. pneumoniae expression library. The invention provides 12 novel surface exposed proteins, Omp4-Omp15 (see w88417-28), and nucleic acid sequences encoding them (see x06816-27). A new species specific test is claimed that is used to identify mammals (including humans) infected with Chlamydia that the total control of the contr

This polypeptide comprises the novel 90.0 kpa surface protein Omp8 of the human receivators.

exposed

pneumoniae. The test comprises detecting antibodies specific for Omp4-Omp15 or detecting nucleic acid fragments encoding these outweenbrane proteins, especially by PCR. The proteins are also used

                            expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they encode according to standard recombinant DNA methodologies. The proteins may then be used as antigens for the production of antibodies proteins may then be used as antigens for the production of antibodies antibodies may also be used as diagnostic reagents for detecting infections. Chlamydia is a pathogen implicated in the development of (for example) community acquired pneumonia, upper respiratory tract disease (especially bronchitis and sinusitis, asthmatic bronchitis, adult-onset asthma and acute exacerbations of asthma in adults.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            кеу
                                                                                                                                                                                            CPN100635. The nucleic acids (and their complementary sequences) may be used as diagnostic agents for detecting the presence of nucleic acids encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosing Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction (PCR) assays. Antisense sequences may be used to down regulate
                                                                                                                                                                                                                                                                                                                                                                            Nucleic acids encoding polypeptide antigens from Chlamydia useful for preventing, diagnosing and treating diseases such as community acquired pneumonia, bronchitis, sinusitis and asthmatic bronchitis, adult-onset
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               01-DEC-1999;

```
CC encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosing Chlamydia infections for example, they may CC and therefore, for diagnosing Chlamydia infections. For example, they may CC be used as primers and probes for diagnostic polymerase chain reaction (PCR) assays. Antisense sequences may be used to down regulate concile acids may also be used to produce the protein antigens they can encode according to standard recombinant DNA methodologies. The CC encode according to standard recombinant DNA methodologies. The CC i.e. as vaccines) for preventing infection by Chlamydia. The CC ii.e. as vaccines) for preventing infection by Chlamydia. The CC infections. Chlamydia is a pathogen implicated in the development of CC infections. Chlamydia is a pathogen implicated in the development of CC infections. Chlamydia is a pathogen implicated in the development of CC isease (especially bronchitis and sinusitis, asthmatic bronchitis, adults.

protein Omp4 of the human respiratory pathogen Chlamydia protein Omp4 of the human respiratory pathogen Chlamydia pneumoniae. Its amino acid sequence was deduced from DNA (see X06816) isolated from a C. pneumoniae expression library. The invention provides 12 novel surface exposed proteins, Omp4-Omp15 (see W88417-28), and nucleic acid sequences encoding them (see X06816-27). A new species specific test is claimed that is used to identify mammals (including humans) infected with Chlamydia (omp4-Omp15 or detecting nucleic acid fragments encoding these outer omp4-Omp15 or detecting nucleic acid fragments encoding these outer of the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of nammals, the nucleic acids being particularly useful as DNA vaccines for effecting in vivo expression of antiques. The vaccines may also prevent atherosclerosis and bronchial asthma, which are possibly associated with C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             438 PSLSQDPQALLIMEAGTSLKTSS-DLKLATLSIPLHSLDTEKSVTIHAPNLSIQKIFLSN 496
